

## TOPCON OCT3

### **Why we are doing this study:**

This is a study for children age 7 to 11 years who have myopia (nearsightedness). We are trying to find out if new contact lens or glasses designs can help to reduce the progression of myopia in children.

### **Who can be in the study?**

This is a study for healthy volunteers 18 years or older with no history of eye diseases.

### **What the study involves:**

This study will be one visit that will take one to two hours. During your visit, you will

- have your visual acuity and eye pressure checked
- have an eye exam to make sure you are eligible
- have images of the back of your eye taken with the two study imaging devices

### **Will you directly benefit from the study?**

Being in this study won't directly benefit participants. We hope that the measurements from this study allow us to provide better treatment for people with eye diseases in the future.

### **Other things you should know about the study:**

You will receive up to \$100 for your participation from this study.
